Mining Industry Consultants
Reference Material Manufacture and Sales

Certified Gold and Silver on Carbon Reference Material

GBC615-2

Certified Control Values

Gold
- Gold Grade: 467 ppm
- Standard Deviation: 18 ppm
- Confidence Interval: +/- 4.88 ppm

Silver
- Silver Grade: 57 ppm
- Standard Deviation: nr ppm
- Confidence Interval: nr ppm

CRM Details

Control Statistic Details
Control statistics were produced from a dedicated certification program in March-2015. A total of 58 gold results were used to certify this material.

Source
Minesite Carbon Material

Usage
This product is for use in the mining industry as a reference material for monitoring and testing the accuracy of laboratory assaying. Drying of this material at 105°C is required prior to analysis.

Preparation and Packaging
All CRMs are dried in an oven for a minimum of 12 hours at 105°C. The dry material is then pulverised to better than 75 micron (nominal mean of 45 micron). The material is then homogenised in a vee-blender and stored in a sealed, stable container ready for final packaging.

Materials are statistically sampled from stores, then packaged into heat sealed, air tight, foil lined pulp packets ready for distribution. All packaging has been chosen to ensure minimal contamination from outside sources during shipment, use and storage.

Assay Testwork
This material was certified in a dedicated certification program involving six laboratories. 10 samples of the final material were submitted to each laboratory for analysis.

Stability
This product remains stable in its original packaging, away from direct sunlight.

Material Safety
This product is not hazardous and non-toxic.
