CRM Details

Control Statistic Details
Control statistics were produced from results accumulated in the April-2004 & October-2005 round robins. The number of results used to certify each analyte is shown in the table above.

Material Description
This material is described as a Lead / Zinc Middlings Material (Sulphide).

Colour Designation (ISCC-NBS, SP440)
This material is medium dark gray in colour.

Usage
This product is for use in the mining industry as a reference material for monitoring and testing the accuracy of laboratory assaying.

Preparation and Packaging
All CRMs are dried in an oven for a minimum of 12 hours at 110°C. The dry material is then pulverised to better than 75 micron (nominal mean of 45 micron) using an air classifier. The material is then homogenised and stored in a sealed, stable container ready for final packaging.

Assay Testwork
All standards are tested thoroughly in the Geostats bi-annual laboratory survey. This involves assaying by multiple laboratories from around the world. Results are compiled into a comprehensive report detailing statistics for each standard. Assay distributions are checked and processed statistically, producing monitoring statistics for these standards. Materials are tested regularly to ensure minimal contamination from outside sources during shipment, use and storage.

Stability
This product remains stable in its original packaging, away from direct sunlight.

Material Safety
This product is not hazardous and non-toxic.
