

**GEOSTATS PTY LTD**  
Mining Industry Consultants  
Reference Material Manufacture and Sales

**Certified Gold and Silver on Carbon Reference Material Product Code**

**GLC917-1**

**Certified Control Values**

**Gold**

Gold Grade 2361 ppm  
Standard Deviation 103 ppm  
Confidence Interval +/- 21.4 ppm

**Silver**

Silver Grade 154 ppm  
Standard Deviation 23 ppm  
Confidence Interval +/- 6.71 ppm

**CRM Details**

**Control Statistic Details**

Control statistics were produced from results accumulated in the October-2017 round robin. A total of 92 gold results and 48 silver results were used to certify this material.

**Usage**

This product is for use in the mining industry as a reference material for monitoring and testing the accuracy of laboratory assaying. Drying of this material at 105°C is required prior to analysis.

**Preparation and Packaging**

All CRMs are dried in an oven for a minimum of 12 hours at 110°C. The dry material is then pulverised to better than 75 micron (nominal mean of 45 micron) using an air classifier. The material is then homogenised and stored in a sealed, stable container ready for final packaging.

Materials are statistically sampled from stores, then packaged into heat sealed, air tight, plastic or foil lined pulp packets ready for distribution. All packaging has been chosen to ensure minimal contamination from outside sources during shipment, use and storage.

**Assay Testwork**

All standards are tested thoroughly in the Geostats bi-annual laboratory survey. This involves assaying by multiple laboratories from around the world. Results are compiled into a comprehensive report detailing statistics for each standard. Assay distributions are checked and processed statistically, producing monitoring statistics for these standards. Materials are tested regularly to ensure stability and homogeneity.

**Stability**

This product remains stable in its original packaging, away from direct sunlight.

**Material Safety**

This product is not hazardous and non-toxic.
